

ENERGY MANAGEMENT

As Trakya Döküm, we are committed to ensuring the efficient use of energy resources, continuously improving our energy performance and effectively implementing our energy management system for a sustainable future. We aim to use energy efficiently to protect natural resources, reduce emissions and climate change impacts in our operations.

As Trakya Döküm, we adopt the following principles in line with our Energy Management System Policy:

- To comply with all applicable national and international legislation and standards regarding energy management,
- To set continuous improvement targets to increase energy efficiency and develop strategies to achieve these targets,
- To consider energy performance in the design and modification of facilities, equipment, systems and processes,
- To ensure the effective procurement and use of energy efficient products and services,
- To ensure that employees receive regular trainings on energy efficiency and conservation, and raise their awareness,
- To regularly monitor and report energy performance and share this information transparently,
- To monitor energy consumption, evaluate performance and prepare regular reports to achieve energy saving targets,
- To collaborate with suppliers and business partners to promote the implementation of energy efficiency standards across the entire supply chain.
