

# WASTE MANAGEMENT POLICY

As Trakya Döküm, we adopt the waste management hierarchy by managing all hazardous and non-hazardous waste responsibly and sustainably. Being aware that small actions can make significant differences through collective efforts, we contribute to sustainable environmental management by integrating sustainable waste management into our operations in line with this Policy that we have developed to guide our practices and encourage environmentally friendly behavior.

In line with our Waste Management Policy, we adopt the following principles as Trakya Döküm:

- Adhering to all national and international legislation and standards related to waste management and ensuring that waste disposal is carried out in compliance with the relevant regulations,
- Prioritizing the waste management hierarchy, which includes waste reduction at the source, reuse, recycling and recovery, to ensure the sustainable management of wastes arising from our activities and conducting research to integrate them into the circular economy,
- Developing best practices for the proper segregation and collection of various waste types, including recyclable, non-recyclable and hazardous wastes,
- Ensuring the recycling of wastes such as paper, plastic, glass and electronic waste through authorized facilities,
- Collaborating with our stakeholders to promote environmentally friendly waste management practices and participating in industrial symbiosis projects, when possible,
- Prioritizing to minimize waste at the source through conscious purchasing practices within a responsible supply chain by reducing unnecessary consumption,
- Reducing packaging waste by choosing minimal packaging and environmentally friendly alternatives in purchases,
- Minimizing paper waste by adopting digital documentation and electronic communication methods wherever possible,
- Providing training and conducting awareness-raising activities about waste management practices to our stakeholders and our employees,
- Measuring the amount of waste generated from our activities and regularly evaluating our waste management efforts, developing sustainable waste reduction management strategies and working towards Zero Waste practices.
