

WATER MANAGEMENT POLICY

As Trakya Döküm, we prioritize managing water consumption in a sustainable manner and reducing the risks that could lead to water scarcity, recognizing the importance of water for our value chain and all our stakeholders.

In line with our Water Management Policy, we adopt the following principles, as Trakya Döküm:

- Conducting activities in compliance with national and international regulations and standards regarding water management,
- Implementing efforts to monitor and report water consumption resulting from our activities,
- Setting short, medium and long-term goals related to our water footprint to reduce our water consumption and sharing our performance with stakeholders in the light of transparency and accountability principles,
- Implementing projects aimed at calculating, monitoring and continuously improving green, blue and grey water footprints to reduce water usage and increase resource efficiency,
- Effectively managing our water-related risks and opportunities by integrating them into our processes, reviewing and reporting them,
- Implementing programs to raise awareness among all our stakeholders about the conservation of water resources and conscious water consumption,
- Planning measures to protect natural water resources and collaborating with non-governmental organizations and/or public institutions to develop joint projects.
